High yielding lupin for NSW, SA & Victoria

**KEY FEATURES**
- Significant yield improvement over current varieties in eastern states
- Rated MR to BYMV and MR/MS to CMV
- Rated MR to Phomopsis and Anthracnose
- Recommended for lupin production regions in NSW, SA and Victoria

**MAIN ADVANTAGES**
PBA Bateman™ tested as WALAN2533 is a high yielding Australian sweet lupin variety suitable for lupin growing areas of NSW, SA and Victoria. It provides increased yield and good virus resistance.

**SEED PROTECTION & ROYALTIES**
PBA Bateman™ is protected under Plant Breeder’s Rights (PBR) legislation. Growers can only retain seed from production of PBA Bateman™ for their own seed use.

An End Point Royalty of $2.86 per tonne (GST inclusive), which includes breeder royalties, applies upon delivery of this variety. Seed is available from the commercial partner Seednet.
YIELD & ADAPTATION

PBA Bateman\textsuperscript{a} demonstrated adaptation and high yield performance similar to or better than PBA Jurien\textsuperscript{b}, PBA Barlock\textsuperscript{c} and Mandelup\textsuperscript{d} in NSW, SA and Victorian regions.

Long term yield expressed as % Mandelup\textsuperscript{d} in New South Wales, South Australia and Victoria (2012–2016)

**AGRONOMY**

**Agronomic characteristics**

- PBA Bateman\(^{(a)}\) has similar agronomic characteristics when compared to PBA Jurien\(^{(a)}\), with flowering time similar to PBA Jurien\(^{(a)}\) and Mandelup\(^{(a)}\) and earlier than PBA Barlock\(^{(a)}\).
- PBA Bateman\(^{(a)}\) has a similar plant height to Mandelup\(^{(a)}\), being taller than PBA Barlock\(^{(a)}\).

**Harvestability**

- Harvest height is similar to Mandelup\(^{(a)}\), and is slightly taller than PBA Barlock\(^{(a)}\) and PBA Gunyidi\(^{(a)}\).
- Harvest grain loss risk is similar to that of PBA Barlock\(^{(a)}\), being similar to or slightly less resistant to pod shattering than Coromup\(^{(a)}\), but not as susceptible as Mandelup\(^{(a)}\).
- PBA Bateman\(^{(a)}\) is similar to Jenabillup\(^{(a)}\) with relatively good levels of resistance to lodging.

**Herbicide tolerance**

- PBA Bateman\(^{(a)}\) shows similar tolerance to metribuzin as PBA Jurien\(^{(a)}\), PBA Barlock\(^{(a)}\) and PBA Gunyidi\(^{(a)}\).

---

### DISEASE MANAGEMENT

- Moderately resistant (MR) to anthracnose, similar to PBA Gunyidi\(^{(a)}\) and Mandelup\(^{(a)}\). Seed dressings are still recommended to reduce the risk of seed borne infections in regions where the disease may be prevalent.
- Moderately resistant (MR) to phomopsis stem blight, similar to PBA Barlock\(^{(a)}\).
- Moderately susceptible (MS) to brown spot, similar to most other varieties. Lupin agronomic practices should be followed for this disease.
- Resistant (R) to grey spot.

**Virus**

- Moderately resistant (MR) to BYMV and Black Pod Syndrome (late infection BYMV), similar to or better than Jenabillup\(^{(a)}\).
- Moderately resistant/moderately susceptible (MRMS) to CMV seed transmission, better than PBA Jurien\(^{(a)}\), PBA Gunyidi\(^{(a)}\), Jenabillup\(^{(a)}\) and Mandelup\(^{(a)}\).

PBA is an unincorporated joint venture between the GRDC, University of Adelaide, University of Sydney, SARDI, DEDJTR Victoria, NSW DPI, DAF QLD, DPIRD WA and Pulse Australia.

06A033). PBA Bateman® is named after Batemans Bay, which is a town and bay in the South Coast region of the state of New South Wales, Australia. The town is adjacent to large lupin growing inland areas in NSW.

PBA Bateman® has medium to large seed, similar to Mandelup® and the alkaloid content, on average, is similar to PBA Gunyidi®. Alkaloid contents fluctuate across years, sites and seasonal conditions.

Seed weight data is average of multiple sites and years in WA, SA and NSW 2013-15; Protein and alkaloid is percent As Received on whole seed basis from multiple sites in 2013-2015 (chemical analyses by ChemCentre, Bentley, WA).

BREEDING

PBA Bateman® (tested as WALAN2533) was bred and progressed by Dr Bevan Buichell, Dr Jon Clements, Dr Hua’an Yang, the Lupin Breeding technical team at Agriculture and Food, DPIRD, Western Australia and Mark Richards (NSW DPI). Valuable collaboration from pathologist Geoff Thomas (DPIRD), Amanda Pearce (PIRSA-SARDI) and Alan Meldrum (Pulse Australia) is acknowledged. PBA Bateman® is from a 2007 cross (07A002-[F4]-3) between seed parent, WALAN2294, and pollen composite parent, (06A031, 06A032, 06A033).
